Graded Quiz due Dec 9, 2023 22:09 IST Completed

Question 1

1/1 point (graded)

REST Web Service

Enterprise Java

JSON

Which of the following is a back-end technology?

○ CSS
Web API
○ HTML
○ Browser
✓
Answer Correct: A web API is a back-end technology. Submit You have used 1 of 2 attempts
Tou have used 1 of 2 attempts
Question 2
1/1 point (graded)
What quality makes it possible for you to run JavaScript applications without compiling?
O You can use a text editor to develop JavaScript applications.
The language syntax resembles Java.
JavaScript is an interpreted language.
All modern browsers support JavaScript.
✓
Answer Correct: JavaScript is an interpreted language, and you do not need to compile JavaScript applications before running them.
Submit You have used 2 of 2 attempts
Question 3
1/1 point (graded) Which of the following applications intercepts the call when JavaScript sends a web service request to the Node.js server?
○ css

Answer

Correct: On the server, a Representational State Transfer (REST) web service intercepts the call.

Submit

You have used 2 of 2 attempts

Question 4

1/1 point (graded)

Which of the following is a difference between ES and CommonJS modules?

OmmonJS is a JavaScript language whereas ES is a module specification.

OommonJS modules are written in JavaScript whereas ES modules are not.

CommonJS module files use a .mjs extension whereas ES modules use .js.

ES modules use the import() statement whereas CommonJS modules use require().

Answer

Correct: ES modules use the import() statement whereas CommonJS modules use require().

Submit

You have used 1 of 2 attempts

Question 5

1/1 point (graded)

How do you handle operation results with Node.js?

Specify a relative path to the Node.js script from the module directory.

Create an instance of a web server application.

Write callback functions to handle results when the operations complete.

Use blocking on asynchronous I/O operations.

Answer

Correct:

Instead of blocking on I/O operations, you write asynchronous callback functions to handle results when they complete.

Submit

You have used 2 of 2 attempts

Question 6

1/1 point (graded)

What do you use the http.createServer function for?

() To develop an anonymous function to handle requests and responses

To create an instance of a web server

To specify a main script for your module	
To import a Node.js module	
✓	
Answer	ance of a web corver application
Correct: You use the http.createServer function to create an inst	ance of a web server application.
Submit You have used 2 of 2 attempts	
2	
Question 7	
/1 point (graded)	No.
Vhich core Node.js module can be used for input and output (I/C))
○ URL	
http	
() util	
fs	
Submit You have used 1 of 2 attempts	
Question 8	
Question 8 /1 point (graded)	
Question 8 /1 point (graded)	
Question 8 /1 point (graded) Which is an aspect of Node Package Manager (NPM)?	nges.
Question 8 /1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code.	nges.
Question 8 /1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packation. It creates a package.json file in the project's root directory.	nges.
Question 8 I/1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing package.	ages.
Question 8 /1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packath of the project's root directory. It writes metadata to a package.json file.	ages.
Question 8 //1 point (graded) // Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packatory. It creates a package.json file in the project's root directory. It writes metadata to a package.json file.	
Question 8 I/1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packation. It creates a package.json file in the project's root directory.	
Question 8 I/1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packath of the project's root directory. It writes metadata to a package.json file.	
Question 8 // point (graded) // which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packate of the project of the pr	
Question 8 I/1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packate of the project's root directory. It writes metadata to a package.json file. Answer Correct: NPM functions as a command line interface for installing submit You have used 2 of 2 attempts	
Question 8 I/1 point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packate to the project's root directory. It writes metadata to a package.json file. Answer Correct: NPM functions as a command line interface for installing submit You have used 2 of 2 attempts Question 9	
Question 8 // point (graded) Which is an aspect of Node Package Manager (NPM)? It manages the versioning of source code. It functions as a command line interface for installing packate in the project's root directory. It writes metadata to a package.json file. Answer Correct: NPM functions as a command line interface for installing submit You have used 2 of 2 attempts	

<u> </u>	pecify a main script for your module
○ То с	reate an instance of a web server
~	
Answer Correct: Y	ou can use the require function to import a Node.js module.
Submit	You have used 1 of 2 attempts
Questio	on 10
/1 point (gr	raded) Dens when a module does not have a package.json file?
νιιαι παρμ	Delis Wileit a module does not have a package.json me:
	relative path to the Node.js script changes to an absolute path from the module
direc	11 O I V
	or y.
○ The	require statement assumes that scripts have a file extension of js.
	require statement assumes that scripts have a file extension of js.
Node	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js.
Node	require statement assumes that scripts have a file extension of js.
Node Ther Answer Correct:	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js.
Node Ther Answer Correct: f a module	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest.
Node Ther Inswer Correct: a module ndex.js.	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest. e does not have a package.json file, Node.js assumes that the main class is named
Node Ther Inswer Correct: a module ndex.js.	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest. e does not have a package.json file, Node.js assumes that the main class is named
Node Ther Inswer Correct: f a module ndex.js.	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest. e does not have a package.json file, Node.js assumes that the main class is named
Node Ther Answer Correct: f a module ndex.js.	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest. e does not have a package.json file, Node.js assumes that the main class is named
Node Ther Answer Correct: f a module ndex.js.	require statement assumes that scripts have a file extension of js. e.js assumes that the main class is named index.js. re is no module manifest. e does not have a package.json file, Node.js assumes that the main class is named
